Purpose of Contact Removal of the Air Force Tower and 132 Transformer Foundations and Steam Line Stanchions and Concrete Pads around Buildings 111 and 333

Discussion
Both the Air Force Tower and 132 Transformer Foundation areas were visited during this meeting A proposal was presented to Mr Kruchek regarding the removal of these foundations The proposal entails providing documentation addressing the historical research conducted PCB information provided by Xcel Energy (for the transformer at 132 pad) radiological survey data, and pictures of these foundations Mr Kruchek agreed with this disposal approach Characterization information regarding these areas is attached and indicates that it meets the criteria for free release per the concrete RSOP
In addition, a voice mail was left for Mr Kruchek on 3/29/01 stating that the steam line stanchions for lines feeding B111 and B333 and the concrete sidewalks/pads surrounding these buildings would be included in this project On 4/4/01 Mr Kruchek visited these areas and agreed that the same disposal approach could be used for these concrete areas

The facility in this report includes the concrete pad for the 132 Transformer This pad no longer support the RFETS mission and need to be removed to reduce Site infrastructure risks and/or operating costs The location of the pad is shown in Attachment A The characterization was based on physical chemical and radiological hazards identified in the facility specific Historical Site Assessment Reports and on radiological screens conducted to demonstrate the material can be free released to a sanitary waste landfill The pad will be dispositioned pursuant to the Rocky Flats Cleanup Agreement (RFCA) Environmental media beneath and surrounding the pad was not within the scope of this report

A historical review was conducted to understand history and related hazards associated with the 132 Transformer Pad The review consisted of a walkdown and a document review including review of the Historical Release Report (refer to the D&D Characterization Protocol, MAN-077 DDCP) and documentation provided by New Century Services concerning the PCB content of the transformer

Based upon a review of historical and process knowledge and visual inspections additional sampling was determined not to be necessary for chemical contaminants of concern Following is the information to support this position

Asbestos

Based on the fact that this is a concrete pad with no coatings there is no concern for the presence of Suspect Asbestos Containing Materials

Beryllium

There is no record of beryllium operations or storage being conducted in the area where the pad is located The historical evidence shows the pad is not located near buildings that conducted beryllium operations therefore the pad is not impacted by beryllium operations conducted elsewhere on site

RCRA/CERCLA Constituents [including metals and volatile and semi-volatile organic compounds (VOCs & SVOCs)]

Based on historical knowledge no operations occurred with RCRA or CERCLA constituents at or near the 132 Transformer pad The pad is not painted, therefore concerns of lead based paint are not an issue Visual inspections revealed no chemical staining of the pad Therefore in accordance with 8 CCR 1007 3 Parts 261 and 268 and 40 CFR 302 4 the concrete pad material is not subject to RCRA or CERCLA regulations

Polychlorinated Biphenyls (PCBs)

Included with this report is information from New Century Services that documents the transformer has no PCB content In addition, the pad does not contain nor is it coated with material that contains PCBs Therefore the concrete material is not subject to the requirements of 40 CFR 761

Radiological characterization was performed to define the nature and extent of radioactive materials that may be present on the pad The Property Release Evaluation (PRE) confirmed that the pad does not contain radiological contamination above the surface contamination guidelines provided in DOE Order 5400 5 and the RFETS Radiological Control Manual

Based upon this report and subject to concurrence by the Colorado Department of Public Health and Environment (CDPHE) the 132 Transformer pad is considered to be Type 1 facility and will be removed In accordance with Section 2 2 of MAN-077 DDCP if PDS requirements are met and

the absence of contamination is confirmed, the facility can be free-released It is anticipated that the concrete from this pad will be placed with the concrete from the demolition of Building 111 to be used as free-releasable concrete for backfill on site in accordance with the Concrete RSOP

132 Substation Transformer PCB Content

Your e-mail dated April 12, 2000 requested Public Service Company of Colorado (PSCo) to provide written documentation concerning the PCB levels for the distribution transformer operating at the PSCo temporary substation (Site facility No 132) The information in the following tabulation responds to this request.

Distribution Transformer PSCo Number A-01401
Main Tank Oil - PCB Level < 3 0 PPM
Load Tap Changer Compartment PCB Level < 2.0 PPM

If you have any questions concerning the above PCB data, please contact me at 303-571 3191

Sincerely

Richard J Blatnik

RELEASE EVALUATION FORM

Page 1 of 12

Release Evaluation No 010404-00116-001 EXTENDED No EXPIRES N/A Charge No. N/A

PART I **SENDER/CUSTODIAN**
ACKNOWLEDGEMENT

Description of Property/Waste/Sample To Be Released/Transferred 132 substation slab, fiberglass grating, and small metal stair case

Current Location South of T130 trailer complex

Destination Materials will be either reused on site or be disposed to a proper landfill.

New Recipient/Custodian Cameron Freiboth, B116 X2823

History/Process Knowledge The indicated slab grating, and stair case were used as the foundation for an electrical substation providing service to RFETS The area has never been posted as a RBA/CA, and site documents, including affected soil disturbance permit, indicate no radiological concerns The associated equipment has been removed and unrestricted released under Waste Release Evaluation # 000307-00334-01

Has the specified material ever been in an RBA/CA or contacted DOE controlled radioactive materials? No

1) By signing below I certify information provided in Part I of this release evaluation to be true and accurate
2) By signing below I agree to comply with the specific requirements noted in Part II of this release evaluation.

Sender/Custodian Cameron Freiboth / [signature] Emp No [redacted] Date 04/23/01 Ext: 2823

PART II **RADIOLOGICAL ENGINEERING**

SPECIFIC REQUIREMENTS AND/OR COMMENTS

Process history and previous radiological surveys of associated equipment indicate no radiological concerns for the items listed above. The area in which these materials were utilized is not a Radiological" Area as defined in 10CFR835 As a result, no radiological surveys are required prior to unrestricted release. These materials may be reused or disposed of in accordance with site procedures without further radiological characterization. The underside of the concrete will not require radiological surveys due to the soil disturbance permit indicating no radiological concerns (copy of permit is included as an attachment to this release evaluation) In addition, a copy of the release evaluation associated with the equipment linked to the pad is provided as a part of this release evaluation.

1) Custodian, ensure that only the items described are included as a part of this release evaluation. Ensure that all soil is removed from the collected concrete upon demolition, prior to recycle, reuse, or waste disposal.

2) Custodian, retain a copy of all documents required by this release evaluation. The sender/custodian will be responsible for ensuring a copy of this release evaluation is available for auditing/due diligence purposes

3) Radiological Engineer process release evaluation to indicate an unrestricted free-release. Sign all appropriate documentation required for the disposition of the affected items

Release Evaluation for Waste

A Release Evaluation for Waste requires an evaluation and unrestricted release approval signature The evaluation signature is by the Radiological Engineer (RE) providing the methods or criteria for unrestricted release (i e survey requirements, analytical requirements, no survey required, etc) The unrestricted release approval signature for a Release Evaluation for Waste shall be a RE authorized to provide unrestricted release approval In addition, the evaluation and unrestricted release approval signatures shall not be the same RE The intent of this provision is to provide peer review of the evaluation and method of unrestricted release It is important the RE take the peer review process seriously and not become a "rubber stamp" for their fellow engineer

Release Evaluation for Property

A Release Evaluation for Property requires an evaluation and unrestricted release approval signature For a Release Evaluation for Property the evaluation and unrestricted release signature may be the same RE In the past, only one signature was required for property for which a RE could provide an unrestricted release on the basis of process knowledge/history

Release Evaluation for Samples

Samples are any waste or material that is being shipped to an off-site facility for analysis Samples that may be provided with an unrestricted release using process knowledge/history or standard contamination survey techniques may be authorized for shipment to an off site facility using the signatory requirements specified for property Samples which cannot be provided with an unrestricted release using process knowledge/history or standard contamination survey techniques shall be authorized for shipment from the Site using the methodology specified for waste i e second signature being provided by a RE authorized to perform peer review and approval for shipment.

PROPERTY/WASTE RELEASE EVALUATION SIGNATURE REQUIREMENTS

Release Evaluation # 010404-00116-001

COPY

The approval for transfer/shipment section of a Sample Release Evaluation (SRE) shall be revised as noted below for samples which cannot be provide with an unrestricted release

The samples specified in Part 1 of this release evaluation are being provided with authorization for transport as non radioactive materials in accordance with Department of Transportation (49 CFR) regulation. This authorization for shipment does not constitute an unrestricted release

Additional Documentation

Number of lines per section may be modified or additional pages attached to ensure adequate documentation of information necessary to perform release evaluation.

Additional pages or attachments to a release evaluation shall have the evaluation number Page __ of __, initials of Radiological Engineer signing approval for transfer/shipment and date

31 - 45 - West side of transformer

46 - 60 - South side of transformer

61 - 85 - Accessible misc Equipment, Meter Box, cable, ns wires etc

Random survey point were taken to get A Representative sample of transformer and misc Equipment

The items in this report include the concrete pads surrounding Buildings 111 and 333 and steam line stanchions around these same buildings These items no longer support the RFETS mission and need to be removed to reduce Site infrastructure risks and/or operating costs The locations of these items are shown in Attachment A The characterization was based on physical chemical and radiological hazards identified in area specific Historical Site Assessment Reports, and on radiological screens conducted to demonstrate the material can be free released to a sanitary waste landfill The pads will be dispositioned pursuant to the Rocky Flats Cleanup Agreement (RFCA) Environmental media beneath and surrounding the pads were not within the scope of this report

A historical review was conducted to understand history and related hazards associated with the various concrete pad areas The review consisted of a walkdown and a document review including review of the Historical Release Report (refer to the D&D Characterization Protocol, MAN-077 DDCP)

Based upon a review of historical and process knowledge and visual inspections additional sampling was determined not to be necessary for chemical contaminants of concern Following is the information to support this position

Asbestos

Based on the fact that these are concrete pads with no coatings there is no concern for the presence of Suspect Asbestos Containing Materials

Beryllium

There is no record of beryllium operations or storage being conducted in the area where these pads are located The historical evidence shows the pads are not located near buildings that conducted beryllium operations therefore the pads are not impacted by beryllium operations conducted elsewhere on site

RCRA/CERCLA Constituents [including metals and volatile and semi-volatile organic compounds (VOCs & SVOCs)]

Based on historical knowledge no operations occurred with RCRA or CERCLA constituents on the pads The pads are not painted, therefore concerns of lead based paint are not an issue Visual inspections revealed no chemical staining of the pads Therefore, in accordance with 8 CCR 1007 3 Parts 261 and 268 and 40 CFR 302 4 the concrete pad material is not subject to RCRA or CERCLA regulations

Polychlorinated Biphenyls (PCBs)

Based on historical knowledge and visual observation, the concrete material does not contain nor is it coated with material that contains PCBs There is no history of PCB contamination from past spill/releases nor was PCB containing liquids managed in this area Therefore the concrete material is not subject to the requirements of 40 CFR 761

Radiological characterization was performed to define the nature and extent of radioactive materials that may be present on the pads The Property Release Evaluation (PRE) confirmed that the pads do not contain radiological contamination above the surface contamination guidelines provided in DOE Order 5400 5 and the RFETS Radiological Control Manual

Based upon this report and subject to concurrence by the Colorado Department of Public Health and Environment (CDPHE) the concrete pads are considered to be Type 1 facilities, and will be removed In accordance with Section 2 2 of MAN-077 DDCP if PDS requirements are met and the

absence of contamination is confirmed, the facility can be free-released" It is anticipated that the concrete from these pads will be placed with the concrete from the demolition of Building 111 to be used as free-releasable concrete for backfill on site in accordance with the Concrete RSOP

RELEASE EVALUATION FORM

Page 1 of 4

Release Evaluation No 010404-00116-003 EXTENDED No EXPIRES N/A Charge No N/A

PART I **SENDER/CUSTODIAN**

ACKNOWLEDGEMENT

Description of Property/Waste/Sample To Be Released/Transferred Miscellaneous, small concrete slabs utilized for steam line, light pole, and flower pot footings and sidewalk access at B111 Also miscellaneous metal support poles, wood light poles, metal steam lines, metal stair case, metal grating, two air compressor and miscellaneous cables and parts.

Current Location B111

Destination Materials will be either reused on site or be disposed to a proper landfill.

New Recipient/Custodian Cameron Freiboth, B116 X2823

History/Process Knowledge: The indicated concrete slabs and footings were used as the foundation for B111 steam lines, light posts, and sidewalks for building access. The associated metal light poles, steam lines, and cables also serviced B111 The area has never been posted as a RBA/CA, and site documents, including affected soil disturbance permit, indicate no radiological concerns In addition, all Pre-Demolition Surveys did not indicate exterior contamination of B111 All associated equipment will be removed and disposed according to site requirements

Has the specified material ever been in an RBA/CA or contacted DOE controlled radioactive materials? No

1) By signing below I certify information provided in Part I of this release evaluation to be true and accurate
2) By signing below I agree to comply with the specific requirements noted in Part II of this release evaluation.

Sender/Custodian Cameron Freiboth / [signature] Emp No [redacted] Date 04/23/01 Ext: 2823

PART II **RADIOLOGICAL ENGINEERING**

SPECIFIC REQUIREMENTS AND/OR COMMENTS

Process history indicates no radiological concerns for the concrete slabs and associated equipment listed above. The area in which these materials were utilized is not a Radiological Area as defined in 10CFR835 In addition, all exterior surveys conducted in association with pre-demolition surveys of B111 did not indicate any exterior contamination in excess of Table 2 2 limits of the Site Rad. Con. Manual. As a result, no radiological surveys are required prior to unrestricted release. These materials may be reused or disposed of in accordance with site procedures, without further radiological characterization. The underside of the concrete will not require radiological surveys due to the soil disturbance permit indicating no radiological concerns (copy of permit is included as an attachment to this release evaluation)

1) Custodian, ensure that only the items described are included as a part of this release evaluation. Ensure that all soil is removed from the collected concrete upon demolition prior to recycle, reuse, or waste disposal.

2) Custodian, retain a copy of all documents required by this release evaluation. The sender/custodian will be responsible for ensuring a copy of this release evaluation is available for auditing/due diligence purposes

3) Radiological Engineer process release evaluation to indicate an unrestricted free-release. Sign all appropriate documentation required for the disposition of the affected items.

Release Evaluation for Waste

A Release Evaluation for Waste requires an evaluation and unrestricted release approval signature The evaluation signature is by the Radiological Engineer (RE) providing the methods or criteria for unrestricted release (i e survey requirements analytical requirements, no survey required, etc.) The unrestricted release approval signature for a Release Evaluation for Waste shall be a RE authorized to provide unrestricted release approval In addition, the evaluation and unrestricted release approval signatures shall not be the same RE The intent of this provision is to provide peer review of the evaluation and method of unrestricted release It is important the RE take the peer review process seriously and not become a "rubber stamp" for their fellow engineer

Release Evaluation for Property

A Release Evaluation for Property requires an evaluation and unrestricted release approval signature For a Release Evaluation for Property the evaluation and unrestricted release signature may be the same RE In the past, only one signature was required for property for which a RE could provide an unrestricted release on the basis of process knowledge/history

Release Evaluation for Samples

Samples are any waste or material that is being shipped to an off-site facility for analysis Samples that may be provided with an unrestricted release using process knowledge/history or standard contamination survey techniques may be authorized for shipment to an off-site facility using the signatory requirements specified for property Samples which cannot be provided with an unrestricted release using process knowledge/history or standard contamination survey techniques shall be authorized for shipment from the Site using the methodology specified for waste i e second signature being provided by a RE authorized to perform peer review and approval for shipment.

PROPERTY/WASTE RELEASE EVALUATION SIGNATURE REQUIREMENTS

Release Evaluation # 010404-00116-003 COPY

The approval for transfer/shipment section of a Sample Release Evaluation (SRE) shall be revised as noted below for samples which cannot be provide with an unrestricted release

The samples specified in Part 1 of this release evaluation are being provided with authorization for transport as non radioactive materials in accordance with Department of Transportation (49 CFR) regulation. This authorization for shipment does not constitute an unrestricted release

Additional Documentation

Number of lines per section may be modified or additional pages attached to ensure adequate documentation of information necessary to perform release evaluation.

Additional pages or attachments to a release evaluation shall have the evaluation number Page __ of __, initials of Radiological Engineer signing approval for transfer/shipment and date

Remediation, Industrial D&D, & Site Services

Soil Disturbance Site Survey Assessment Report

Authorization Number	EFD30612
Project Title	Building 111 D & D
Prepared By	Chad Blake, Radiological Engineer RISS X5909
Radiological Engineering Number	CB 005-01
Date	January 24 2001

This soil disturbance package addresses the removal of the foundation walls to approximately 3 feet below ground level, the removal of steam lines footings and the capping of buried utility lines (see attached documentation)

The planned work location is not within an Individual Hazardous Substance Site (IHSS) see environmental assessment for Potential Area of Concern (PAC) information. Historical information and process knowledge indicate that the radiological soil concentration in this area is at or near background levels (well below Tier II action levels) therefore a Radiological Work Permit **will not be required** to perform this work.

There are additional Radiological Protection requirements for the unrestricted release of materials from RFETS The requirements are as follows

- **All wastes generated and property/equipment/samples** associated with this project (including excavation equipment) must be evaluated in accordance with *PRO-141 RSP 09 01* Unrestricted Release of Property Material, Equipment and Waste, and *PRO-1004 RSP-09 08* Radioactive Material Transfer and Unrestricted Release of Property Waste and Samples or RFETS pre-demolition survey plan for D&D facilities.

The area in which work will be conducted is controlled by RISS A copy of this correspondence has been sent to Curtis Bean, RISS Radiological Safety Manager Please contact Curtis at X2069 for further radiological support.

Written direction from K-H Environmental Compliance (Greg Sollner x3541) is required to disposition soils

Deviations from the currently defined scope of work will require further evaluation by Radiological Engineering

If any unusual material/debris is encountered during this excavation, work must be stopped and RISS Radiological Engineering and Operations notified for evaluation prior to continuing

Soil Disturbance Site Survey Assessment Report

Authorization Number	EFD30612
Project Title	Building 333 D & D
Prepared By	Chad Blake, Radiological Engineer, RISS X5909
Radiological Engineering Number	CB 006-01
Date	January 24 2001

This soil disturbance package addresses the removal of the foundation walls to approximately 3 feet below ground level and the capping of buried utility lines (see attached documentation)

The planned work location is not within an Individual Hazardous Substance Site (IHSS) Potential Area of Concern (PAC) or Under Building Contamination (UBC) site Historical information and process knowledge indicate that the radiological soil concentration in this area is at or near background levels (well below Tier II action levels) therefore, a Radiological Work Permit **will not be required** to perform this work.

There are additional Radiological Protection requirements for the unrestricted release of materials from RFETS The requirements are as follows

- **All wastes generated and property/equipment/samples** associated with this project (including excavation equipment) must be evaluated in accordance with *PRO-141 RSP 09 01* Unrestricted Release of Property Material, Equipment and Waste, and *PRO-1004 RSP-09 08* Radioactive Material Transfer and Unrestricted Release of Property, Waste and Samples or RFETS pre-demolition survey plan for D&D facilities

The area in which work will be conducted is controlled by RISS A copy of this correspondence has been sent to Curtis Bean, RISS Radiological Safety Manager Please contact Curtis at X2069 for further radiological support.

Written direction from K-H Environmental Compliance (Greg Sollner, x3541) is required to disposition soils

Deviations from the currently defined scope of work will require further evaluation by Radiological Engineering

If any unusual material/debris is encountered during this excavation, work must be stopped and RISS Radiological Engineering and Operations notified for evaluation prior to continuing

Facilities in this report include the concrete pads for the Air Force towers These pads no longer support the RFETS mission and need to be removed to reduce Site infrastructure risks and/or operating costs The location of these pads is shown in Attachment A The characterization was based on physical chemical and radiological hazards identified in the facility specific Historical Site Assessment Reports and on radiological screens conducted to demonstrate the material can be free released to a sanitary waste landfill The pads will be dispositioned pursuant to the Rocky Flats Cleanup Agreement (RFCA) Environmental media beneath and surrounding the pads were not within the scope of this report

A historical review was conducted to understand history and related hazards associated with the Air Force Tower The review consisted of a walkdown and a document review including review of the Historical Release Report (refer to the D&D Characterization Protocol, MAN-077 DDCP)

Based upon a review of historical and process knowledge and visual inspections additional sampling was determined not to be necessary for chemical contaminants of concern Following is the information to support this position

Asbestos

Based on the fact that these are concrete pads with no coatings there is no concern for the presence of Suspect Asbestos Containing Materials

Beryllium

There is no record of beryllium operations or storage being conducted in the Buffer Zone where these pads are located The historical evidence shows the pads are not located near buildings that conducted beryllium operations therefore the pads are not impacted by beryllium operations conducted elsewhere on site

RCRA/CERCLA Constituents [including metals and volatile and semi-volatile organic compounds (VOCs & SVOCs)]

Based on historical knowledge no operations occurred with RCRA or CERCLA constituents at or near the Air Force Tower pads The pads are not painted, therefore concerns of lead based paint are not an issue Visual inspections revealed no chemical staining of the pads Therefore in accordance with 8 CCR 1007 3 Parts 261 and 268 and 40 CFR 302 4 the concrete pad material is not subject to RCRA or CERCLA regulations

Polychlorinated Biphenyls (PCBs)

Based on historical knowledge and visual observation, the concrete material does not contain nor is it coated with material that contains PCBs There is no history of PCB contamination from past spill/releases nor was PCB containing liquids managed in this area Therefore the concrete material is not subject to the requirements of 40 CFR 761

It should be noted that although these pads are near the area that was once part of the east spray field project, these pads are not in an IHSS or PAC Therefore no sampling or soil remediation is required

Radiological characterization was performed to define the nature and extent of radioactive materials that may be present on the pads The Property Release Evaluation (PRE) confirmed that the pads do not contain radiological contamination above the surface contamination guidelines provided in DOE Order 5400 5 and the RFETS Radiological Control Manual

41

Based upon this report and subject to concurrence by the Colorado Department of Public Health and Environment (CDPHE) the Air Force Tower pads are considered to be Type 1 facilities and will be removed In accordance with Section 2 2 of MAN-077 DDCP "if PDS requirements are met and the absence of contamination is confirmed, the facility can be free-released

Soil Disturbance Site Survey Assessment Report

Authorization Number	EFB70200
Project Title	Clean Up GWEN Tower Area – East Buffer Zone
Prepared By	Chad Blake Radiological Engineer RISS X5909
Radiological Engineering Number	011-01
Date	February 22 2001

This soil disturbance package addresses clean up efforts in the GWEN Tower area location in the East Buffer Zone (the attached work package includes maps of the proposed locations) Materials to be removed include posts anchors concrete slabs fences etc

The planned sampling locations are not within an Individual Hazardous Substance Site (IHSS) or Potential Area of Concern (PAC) Historical data and process knowledge indicate that radiological soil concentration levels in this area are well below RFCA Tier II Action Levels therefore entry into Soil Contamination Areas will not be required A Radiological Work Permit **will not be required** to perform this work. Sampling is required in accordance with the attached environmental assessment however radiological analysis is not required

The work will require entry into a Controlled Area (for radiological purposes) Entry and Exit requirements are as follows

- Successful completion of Visitor Orientation for unescorted entry of members of the general public
- General Employee Radiological Training
- There are no specific requirements for personnel exiting a Controlled Area
- All Buffer Zone activities must be scheduled on the Plan of the Day (contact Randy Guild X5302)

There are additional Radiological Protection requirements for the unrestricted release of materials from RFETS The requirements are as follows

- **All wastes** generated and **property/equipment/samples** associated with this project (including equipment, concrete waste etc) must be evaluated in accordance with *PRO 141 RSP 09 01* Unrestricted Release of Property Material Equipment and Waste and *PRO 1004 RSP 09 08* Radioactive Material Transfer and Unrestricted Release of Property Waste and Samples

53

The area in which work will be conducted is controlled by RISS A copy of this correspondence has been sent to Curtis Bean, RISS Radiological Safety Manager Please contact Curtis at X2069 for further radiological support Radiological Operations (RCT) support will always be available to the project on a call basis (frisking surveys etc) but is not required Radiological Engineering support will also be available to perform the required release evaluations listed above as well as to answer any questions the project may have Please feel free to contact me at X5909

Written direction from K H Environmental Compliance (Greg Sollner x3541) is required to disposition soils

Deviations from the currently defined scope of work will require further evaluation by Radiological Engineering

If any unusual material/debris is encountered during this excavation, work must be stopped and RISS Radiological Engineering and Operations notified for evaluation prior to continuing
